

Course: Information Architecture

Course Project 25

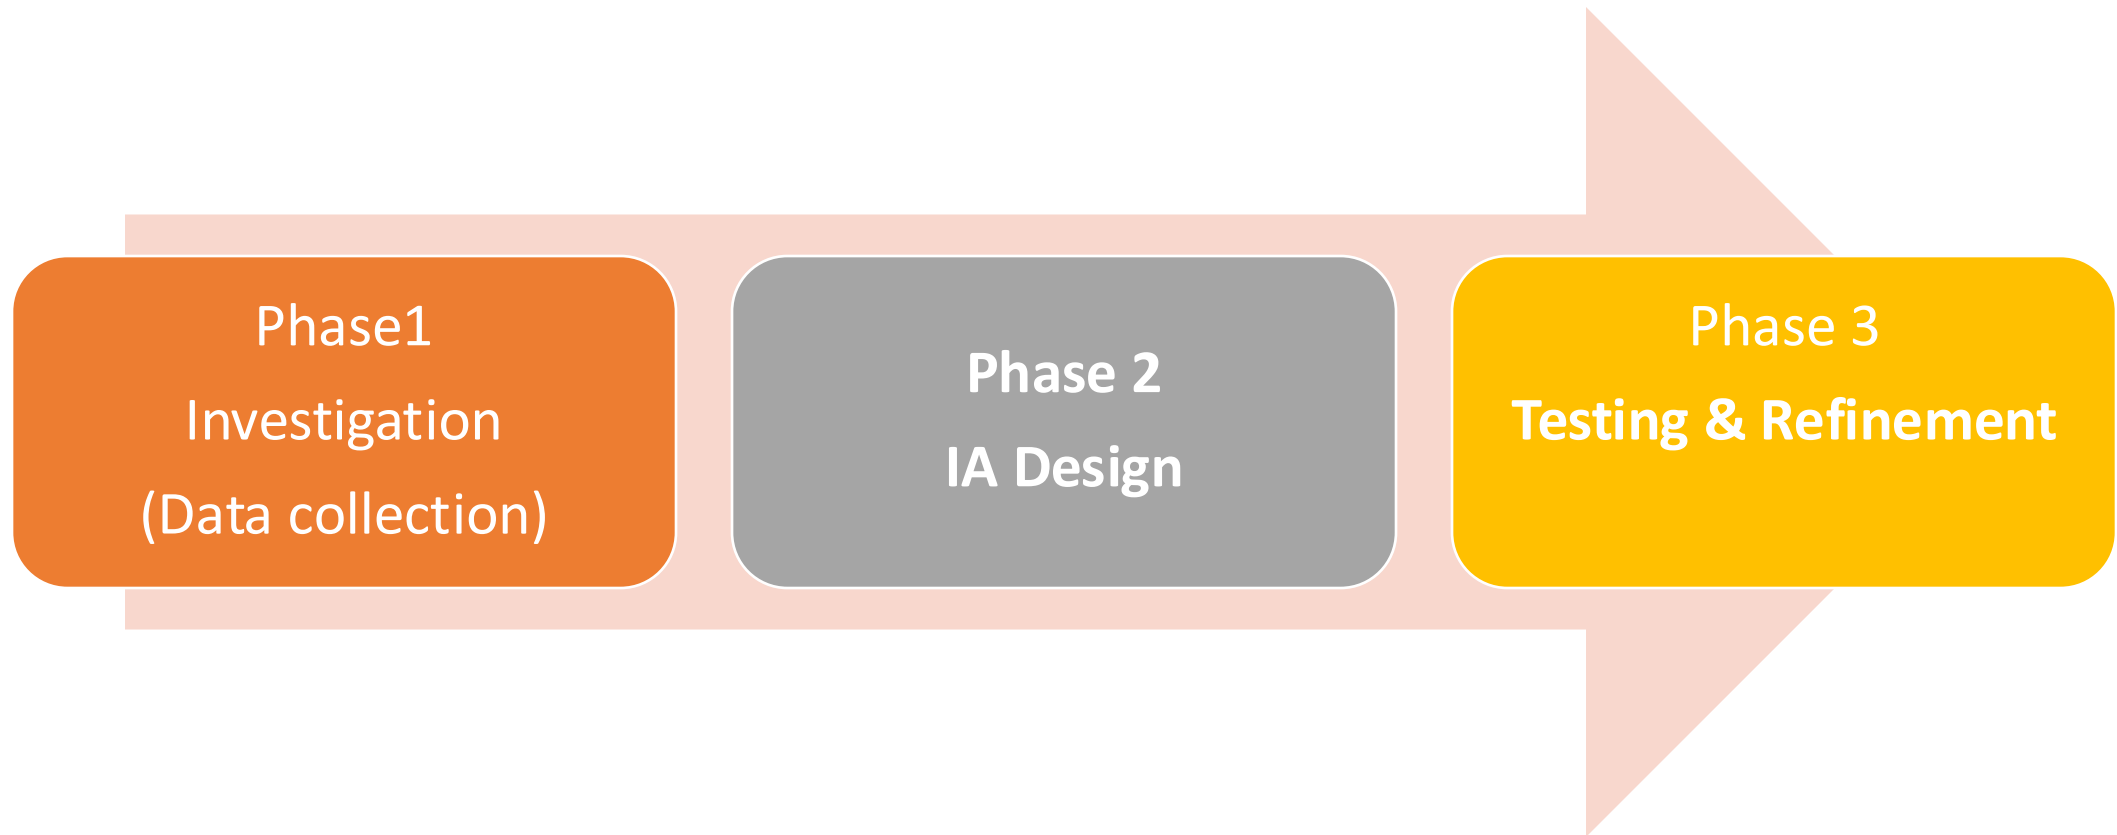

Duration: 4-6 Weeks

The scope of the project

- Mobile App Information Architecture for a Grocery Delivery Service
- Each group should choose an application by the end of this week 10/4/2025
- **Project Overview**
- Students will investigate the **information architecture (IA)** of a grocery delivery website/app. The goal is to optimize **product categorization, search functionality, and checkout flow** for a seamless user experience.

Project Phases

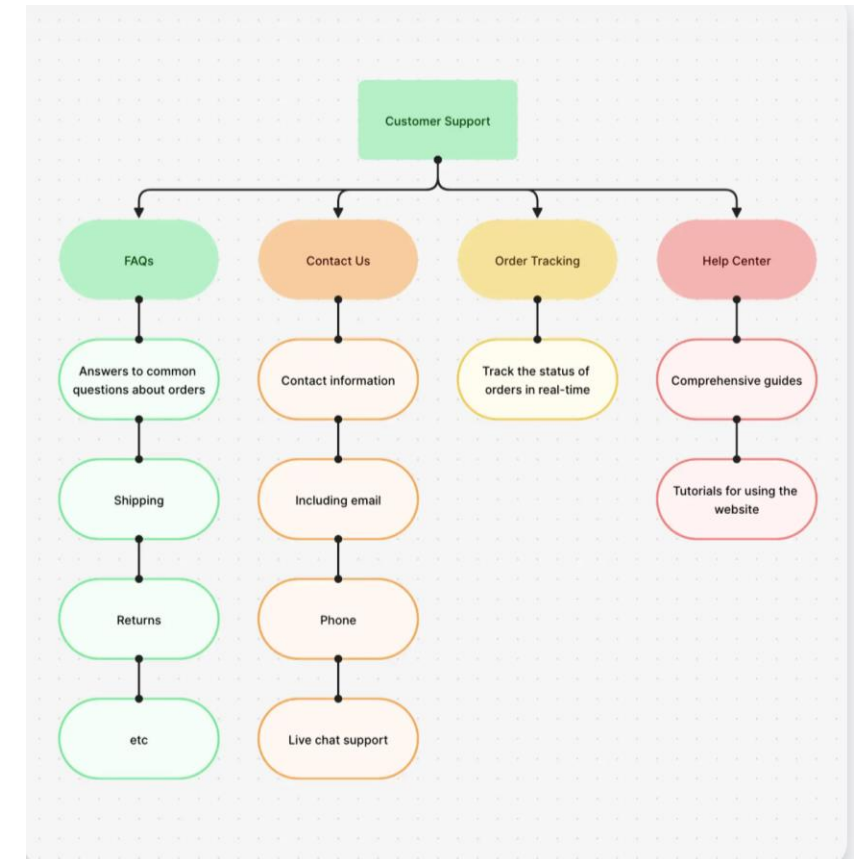

Phase 1: Investigation

Data collection and analysis

- Week 1: (Choose only one tool)
- **User Research:**
 - Conduct surveys/interviews with online grocery shoppers.
 - Identify pain points (e.g., difficulty finding products, confusing checkout).
- **Competitive Analysis:** Compare IA of platforms
- **Heuristic Evaluation:** Assess an existing grocery website for IA flaws.
- **Deliverables:**
 - ✓ User personas (e.g., busy parents, students, elderly shoppers)
 - ✓ Research report (key findings + competitor insights)

Phase 2: IA Design

- **Card Sorting (Open/Closed):**
 - Users group grocery items (e.g., "Dairy," "Organic," "Snacks").
 - Define optimal categories and subcategories.
- **Sitemap Creation:**
 - Structure main sections (e.g., Shop, Deals, Recipes, Account).
 - Organize product hierarchy (e.g., **Beverages** → **Coffee** → **Instant Coffee**).
- **Navigation & Search:**
 - Design filters (e.g., dietary restrictions, price range).
 - Improve search with autocomplete & synonyms (e.g., "Tomato" vs. "Tomatoes").
- **Wireframing (Low-Fi):** Sketch key pages (homepage, product list, cart).
- **Deliverables:**
 - ✓ Card sorting results
 - ✓ Sitemap (digital tool or hand-drawn)
 - ✓ Low-fi wireframes (Figma/Balsamiq)

Phase 3: Testing & Refinement

- **Tree Testing:** Validate if users can find items quickly (e.g., "Find gluten-free pasta").
- **Usability Testing:**
 - Task 1: Add a specific item to cart (e.g., "Lactose-free milk").
 - Task 2: Apply a discount coupon at checkout.
- **Iterate:** Refine categories/labels based on feedback.
- **Deliverables:**
 - ✓ Test results (success rates, pain points)
 - ✓ Revised IA (updated sitemap/wireframes)

Phase 4: Documentation and final report

- A final report should be submitted by the **10th week 21/5/2025 only by the leader!**
- It should include the following elements:
 1. Title
 2. Group members data
 3. Abstract
 4. Introduction
 5. Phase 1
 6. Phase 2
 7. Phase 3
 8. Conclusion
 9. Task table
